HIGHLIGHTS

AI Software Engineer with 3+ years building production **Agentic AI** systems, **RAG** pipelines, LLM-integrated apps, and **AI agents** that solve real-world problems end-to-end.

Expert in **Python, FastAPI/Django, microservices**, async/concurrent systems, and **AWS** (*Lambda, Bedrock, SQS/SNS, Textract*) architecting and deploying scalable backends from design to production.

TECHNICAL SKILLS

Backend & Async Systems: Python, JavaScript, TypeScript, FastAPI, Django, async/await, TaskIQ, Celery, REST APIs, microservices

RAG & Vector Search: RAG pipelines, FAISS, Pinecone, MongoDB Vector Search, embeddings, chunking, similarity search, Langchain

Fine-Tuning & Model Adaptation: Hugging Face, LoRA/adapters, pre-trained weights, dataset prep, AWS SageMaker deployment

Cloud & Infrastructure: AWS (Bedrock, Lambda, SQS/SNS, Textract, SageMaker, S3, ElastiCache), Docker, MongoDB, Redis, GitHub Actions

EXPERIENCE

Netralabs

Jun 2023 – Present

SDE II (prev. SDE I, Associate Python Developer)

Pune, Maharashtra

- Built and shipped multi-agent, multi-step AI pipelines integrating multiple LLM/VLM providers (OpenAI, Anthropic, Qwen, DeepSeek, Mistral) via AWS Bedrock — used in production by government and enterprise clients.
- Integrated Vision-Language models via AWS Bedrock to fix accuracy issues in layout detectors like AWS Textract, building an AI pipeline for complex table detection that reached over 95% accuracy.
- Built async, high-concurrency backend systems using FastAPI, TaskIQ, and Celery for production AI workloads.
- Led the deployment of scalable AI microservices using FastAPI and AWS, and optimized database performance in MongoDB to handle high-concurrency workloads and production AI traffic.

Netra AI

Mar 2023 – Jun 2023

Machine Learning Intern

Remote

- Fine-tuned YOLOv5 models for object detection and deployed them as Flask APIs.
- Built LangChain-based chatbots for email automation and invoice data extraction.
- Won “Intern of the Month” twice for shipping reliable AI automation tools.

PROJECTS

Accessibility on Demand (AOD) — US Section 508 PDF Compliance Platform | Python, FastAPI, AWS (Bedrock, SQS/SNS, ElastiCache, S3), MongoDB, Docker, TaskIQ

- Built multi-step AI agent pipelines using Vision-Language Models (AWS Bedrock) to auto-fix complex PDF tag structures — tables, lists, forms — reaching ~95% accuracy.
- Rebuilt the pipeline from sync to async batch processing (TaskIQ + AWS SQS/SNS) for Textract job polling, fixing concurrency bottlenecks and improving speed by 20x.
- Designed a multi-tenant SaaS backend with per-tenant data isolation across MongoDB and S3, and added AWS ElastiCache rate limiting and queue management to handle high-concurrency traffic without server overload.
- Cut LLM processing costs by ~40% by routing simple PDF elements to standard tools and saving VLM agents for complex tasks.
- Platform now ranked #1 globally for PDF accessibility, ahead of Adobe in compliance scores.

Ground Truth — No-Code AI Agent Workflow Builder | Python, FastAPI, LangChain, FAISS, Pinecone, AWS SageMaker, React, ReactFlow

- Built a drag-and-drop workflow builder (ReactFlow + FastAPI) for creating AI agents that follow custom decision paths.
- Built a Decision Gate node using LLM classification to route conversations to different paths dynamically a custom orchestration pattern on FastAPI.

- Built RAG pipelines with LangChain, FAISS, Pinecone, and MongoDB Vector Search for retrieval over user-uploaded data.
- Added a no-code fine-tuning feature: users pick any Hugging Face model and adapter, upload a dataset, and the system auto fine-tunes and deploys it to AWS SageMaker, an alternative to calling OpenAI/Anthropic directly.
- Embedded a Python interpreter for custom code-execution steps, and integrated multiple LLM APIs (OpenAI, Anthropic, Cohere) for agent orchestration and authentication.

EDUCATION

BCAS, University of Delhi <i>BSC.(H) in Polymer Science GPA: Education #2</i>	July 2019 – May 2022 Delhi, India
Mccombs School of Business <i>Post Grad Program in Artificial Intelligence and Machine Learning</i>	Aug 2022 – Aug 2023 Austin, Texas, USA

ACHIEVEMENTS

- Core engineer on the world's #1 ranked PDF accessibility platform (used by the US DOJ) — VLM-based AI agents reach ~95% accuracy fixing complex tag structures.
- Rebuilt the AI document pipeline to async processing, speeding up system performance by 20x.
- Slashed LLM and AI processing costs by 40% using smart request routing and batching.
- Won "Intern of the Month" twice for shipping production-ready AI chatbots and vision models. [\[View\]](#)
- Achieved top-tier performance in PG Diploma in Artificial Intelligence & Machine Learning, placing among the highest-performing students in the batch. [\[View\]](#)
